### ABSTRACT

~~The invention relates to a~~ A high-pressure discharge lamp having has a discharge vessel (10) with a ceramic wall (1) which is closed at one end by a plug. The plug (2) is provided with an electrode (3) arranged in the discharge vessel (10). The ceramic wall (1) and the plug (2) are jointed by a fusion joint (4). The fusion joint (4) comprises an alloy comprising substantially molybdenum and aluminum. Preferably, the fusion joint (4) comprises a material selected from the group formed by  $\text{Al}_3\text{Mo}_3$ ,  $\text{Al}_{63}\text{Mo}_{37}$ ,  $\text{Al}_{65}\text{Mo}_{35}$ ,  $\text{AlMo}$ ,  $\text{AlMo}_3$  and combinations of said materials. Preferably, the plug (2) comprises a material selected from the group formed by molybdenum, tungsten and combinations of said materials. Preferably, the ceramic wall (1) comprises aluminum nitride. According to the invention, the plug (2) has a high corrosion resistance.
